

ABOVEGROUND SPOT-SPITTER®

The original spray stake

Primerus Products, LLC continues the tradition of the SPOT-SPITTER - the original spray stake. Ease of use, performance and low cost have made this product a favorite among greenhouse and nursery growers world-wide. Simplicity in design and easy installation mean lower labor and material costs. And since we offer a variety of wetting patterns and flow rates, you're sure to find a SPOT-SPITTER that fits your application.

The SPOT-SPITTER controls water flow at the emitter, where it matters most. Other mini-sprayers require tedious modifications of tube-lengths to deliver the flow characteristics you can get in seconds using the SPOT-SPITTER.

And unlike other spray stakes that tend to deform or break at the spray tip, the SPOT-SPITTER is made from premium acetal resins, which resist tip damage and provide years of trouble-free operation.

The loyalty to this product among veteran growers, and the continued adoption of it by each new generation, is a great source of pride to us at Primerus. The SPOT-SPITTER embodies the values of reliability and innovation you can expect from Primerus Products, a leader in cost-effective precision water delivery systems.

First, and still the best, the SPOT-SPITTER is the most cost effective, versatile solution for all your mini-spray nursery and greenhouse applications. Don't be fooled by imitations.

The SPOT-SPITTER is the original spray stake, and we have yet to see an imitation that can match the reliability and performance that has made this product the gold standard.

SPOT-SPITTER is a registered trademark of Primerus Products, LLC

The first and still the best

The experts at Primerus Products, LLC have nearly two decades of experience working with the SPOT-SPITTER and its customers in their many varied applications. You can rest assured that the tradition of quality and reliability that have made the SPOT-SPITTER the world's leading spray stake will continue in the capable hands of Primerus.

The AboveGround SPOT-SPITTER® is the most cost-effective, versatile solution for all your mini-spray nursery and greenhouse applications. The SPOT-SPITTER is ideal for any application in which a soil-wetting mini-spray pattern is desired.

Installation and maintenance are a breeze. To install, just slide a length of Primerus polyethylene tubing over the selected spray tip and insert the other end directly into a polyethylene hose. This creates a water-tight fit in seconds, without the need for tools, glue or additional barbs or fittings. It takes just seconds to get the flow characteristics you want. And the SPOT-SPITTER can easily be turned off by reversing it and placing the shut-off tip into the tube.

Every SPOT-SPITTER is manufactured from premium UV-resistant acetal resin to provide years of trouble-free service in both indoor and outdoor applications. Sturdy stabilizer ribs help lock each SPOT-SPITTER in the soil just where you want it, and extra thick construction resists flexing and breakage.

You can rely on Primerus Products and the AboveGround SPOT-SPITTER to deliver unmatched performance for all your mini-spray nursery and greenhouse applications.

Color-coded SPOT-SPITTERs deliver a variety of flow rates and patterns. Exclusive directional indicator allows quick placement. Available options: Standard (4.75"), short (2.75"), Tall (11") and Downspray.
