

Kit **DLPC-250-12** has everything you need to start using drip irrigation. This kit includes 250 ft of 1/2" spacing inline drip tubing and fittings to configure your garden, orchard landscape or vineyard layout.

# GARDEN KIT DLPC-250-12

## INCLUDED IN THIS KIT:

- A. (1) Filter
- B. (1) Pressure Regulator
- C. (1) Hose Swivel
- D. (250ft) 1/2" In-Line Drip Hose
- E. (1) 1/2" Hose Tee
- F. (4) 1/2" Hose Ell
- G. (2) Hose End Closure

\* Typical Hook-Up/Layout  
(Filter A, Regulator B, and Hose Swivel C shown connected to the In-Line Drip Hose)

## KIT INSTRUCTIONS

1. Attach the filter (A) onto existing garden hose or faucet.
2. Attach pressure regulator (B) to the filter (A) and hose swivel (C), see layout in picture above.
3. Lay the 1/2" in-line drip hose (D) out over the area to be irrigated, using the supplied 1/2" hose tee (E) and ells (F) to configure to your layout if needed.
4. Connect the 1/2" in-line drip hose (D) to the hose swivel (C) and turn water on to flush the system.
5. Close the end(s) of the 1/2" in-line drip hose (D) with the included hose end closures (G) by running one side of the tubing through one hole and folding back over "kinking" the line and inserting the end into the opposite hole. See layout in picture above.
6. For best results, irrigate to maintain consistent soil moisture, but avoid "flooding" the root zone.
7. Operation via an optional hose end timer is recommended (visit website).
8. Soluble fertilizers and other chemicals may/should be applied with the kit using an optional chemical injector (visit website).
9. A backflow preventer should be used to protect the water supply against contamination.
10. This kit is modular and expandable, visit our website for more information, videos and additional items and options available.

# RECOMMENDED ITEMS

FROM THE PROS AT  
IRRIGATION-MART

These items are recommended by the **SAVVY** professionals at Irrigation-Mart to enhance your new kit.

## Controllers/Timers

Irrigation-Mart offers a variety of controllers and hose end timers to help automate your irrigation system. We carry models like the mechanical timer (no batteries required) to more flexible battery operated controllers that can be programmed to your watering schedule for full automation. Some models are Bluetooth and Wi-Fi compatible.

## Injectors/Fertilizers

Irrigation-Mart offers many types of chemical injectors; (canister, venturi, water driven proportional pumps) as well as water soluble fertilizers for fertigation through your irrigation system. Our Savvyject is a great option for our Kits and small gardens as it is designed for ease of use with no moving parts compact design and can be used with a wide range of chemicals/fertilizers.

## Soil Moisture

Irrigation-Mart carries a wide range of soil moisture monitoring equipment to help growers determine when and how long to irrigate which prevents overwatering and flushing fertilizer/nutrients past the root zone area. We offer Irrrometer Tensiometers, Watermark meters and sensors as well as soil probes and automation. Let us assist with your soil monitoring needs.

## Irrigation-Mart Tomato Twine

We carry durable poly UV resistant tying twine for field crops such as; tomatoes, peppers, hemp and other vegetable or horticulture crops that require trellising during the season.

## Plasticulture Equipment

Irrigation-Mart carries several brands and models of Plasticulture equipment like plastic mulch layers/bedders, water wheel planters, mulch lifters and wrappers. Typically the type of Plasticulture equipment will be based on the tractor size (HP), size of operation (acres in production and possible expansion), and budget. Contact us for options and availability to suit your needs.

## Ground Cover/Plastic Mulch

We offer woven ground cover as well as plastic mulch film to help weed control in garden, orchard, greenhouse and nursery applications. There are many options such as UV protected (non-degradable), photo and bio degradable, black and black on white, as well as many widths, lengths and thickness to choose from. We also carry plasticulture equipment to help automate the installation of groundcover/plastic mulch and irrigation lines.
