KIT INSTRUCTIONS

1. Screw filter (A) onto existing garden hose or faucet. Use PVC adapter (C) to connect filter (A) and pressure regulator (B).
2. Attach hose adapter (D) to poly supply hose (E) and regulator (B).
3. Route the poly supply hose (E) to pass near the pots/spots to be irrigated; use if needed/desired.
4. At each location, make a hole in the poly supply hose (E) using the hole punch (G), and attach one end of a transfer tube (F) to the poly supply hose (E) using a transfer tubing coupler (J).
5. Place the open end of the piece of transfer tubing (F) on the desired nipple of the spray stake (H) on/off position as shown in the diagram.
6. Place the spray stake (H) in the pot/spot to be watered and position to keep water in the pot/area.
7. After flushing the system, close the end of the poly supply hose (E) using the hose end closure (I).
8. A poly hose coupler (J) and mistake hole plugs (L) are included for repairs as needed.

9. A poly hose coupler (J) and mistake hole plugs (L) are included for repairs as needed.
10. For best results, irrigate often to keep the soil moist, but avoid "flooding" the root zone.
11. A backflow preventer should be used to protect the water supply against contamination.
12. Operation via an optional hose-end mechanical or battery operated timer is recommended.
13. Soluble fertilizers and other chemicals may/should be applied with the kit using an optional chemical injector.
14. This kit is expandable. Contact a sales representative for more information on expanding/customizing your kit.
